

PACKAGING OF DOMINO MODULAR PLANTERS

How they are prepared, identified and shipped.

You will receive the disassembled material in cardboard boxes size 50x50 h40 and / or 50x50 h20 with a maximum weight of 25 kg.

For each module, you will find two boxes.

The first box (main box) is the same for each module. The second box (box two) includes the specific mounting accessories for the planter. The boxes are identified with a red sign.

Modules Q1 and R1 are included in a single box. This box can be identified by a blue sign.

On each box, you will find a sticker that identifies the color of the sheet and the type of the module included in the box.

The extension kit, which allows you to combine and connect multiple modules, is packaged in a different box, size 50x13 h10.

International couriers will carry the goods.

For the filling, we suggest you to insert a layer of expanded clay (4/5 cm) on the bottom, in order to prevent water stagnation on the bottom, then some geotextile (TNT) and finally the soil; we recommend you to use soil with pumice.
